Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-6, 8, and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Adachi (6743994).

Adachi discloses in the figures a contact-type sensor of an object, comprising a sponge 3 and at least one membrane switch (6-9) located thereunder.

The membrane switch comprises three layers 6,7,and 9 of films, namely an input film, an insulating film, and an output film, and wherein through holes are arranged in the insulating film which is arranged between the input film and the output film. Conductive films 5,8 cover surfaces of the input and output films and face the insulating film at locations corresponding to which the through holes are arranged. The input film is arranged under the sponge, wherein an underside of the input film is covered by conductive film or arranged with contacts at the locations corresponding to which the through holes are arranged in the insulating film, and wherein two rows of spaced apart, exposed printed circuit contacts are arranged on the upper side of the output film at the locations corresponding to

which the through holes are arranged in the insulating film. One of the input film and output film are integral with the surface of the object. The input and output films include the conductive films which are metal films.

Allowable Subject Matter

3. Claim 7 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

4. Applicant's arguments with respect to claims 1-9 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael A. Friedhofer whose telephone number is 571-272-1992. The examiner can normally be reached on Mon-Fri 6:00 - 2:30.
